

## **Architectonics: a methodology for teaching**

***Dr. Eduardo F. Macias –Negrete, is a full time professor in a technological university in Juarez, Mexico. He is finishing his dissertation in the School of Education in NMSU Las Cruces. He is minoring in business administration.***

### **ABSTRACT**

**Architectonics (Bajhtin, 1981) is an intuitively necessary non-fortuitous disposition and integration of concrete unique parts and movements into a consummated whole. Applying that concept to the teaching process we have developed an I/thou dialogue with our students which includes fun, knowledge, love and full participation in all the decisions of the classroom.**
